that could support their growth and increase opportunities from new farmers in the country. Rather than undertaking a massive improvement project, this farm chose to construct a new facility, relying on C-Lines, a company specialized in the production of prefabricated buildings of proven reliability. **How did we act?** Having ascertained the customer's requests and needs, C-Lines' [Infinity](#) product was recommended. This fully customizable tailor-made solution fulfilled the requirements of cost-effectiveness and controlled budget on supply and assembly; reduced design and construction times; proven reliability and engineering coordination; high quality final product in conformity with the high international standards; lower operating costs and durability; and on-site construction supervision. During the design phase, we studied how to position/adapt the hatchery equipment and ventilation systems in a versatile way, designing a modular layout which would come together quickly. The result? From the receipt of the materials, to the installation, and [turnkey](#) completion, the 5400 sqm building was completely erected and equipped in 6 months. All of the customer's requirements were met throughout every single phase with the aim of making this farm more competitive on the hatchery market. **What are the technical advantages for the customer?** -Fully-workable 3 meters high attic space -Modular layout with structure-free span up to 28 meters -Enhanced bio-security with special environmental treatments for easy cleaning, waterproofing, and insulation Like any project developed in an international context and under demanding conditions, C-Lines has shown that it can manage complex situations respecting execution times and budget expectations. The Farms' great satisfaction with the brand-new state-of-the-art building is expressed in numbers: the equipment immediately exceeded their expected performance, with a first hatching success rate of 94.5% (with a total capacity installed of 55 million eggs hatched each year). This figure illustrates the perfect suitability between equipment and C-Lines buildings. Another great success signed by C-Lines.
